

Project Profile

Fort Dodge Animal Health Charles City, Iowa

Fort Dodge Animal Health has biological and pharmaceutical facilities around the world that produce numerous veterinary medicine vaccines primarily used in the treatment of livestock and household pets. Hooper Corporation installed pharmaceutical grade purified water piping and water for injection piping systems, both used directly in the manufacturing of veterinary medicines. All pharmaceutical piping is orbital welded 316L Sanitary Stainless Steel. All piping materials for the water for injection system have an electropolish finish. To assure that the interior of the piping is clear and crevice free all welds were logged, 100% interior boroscoped and videotaped for the owners records.
