

Project Profile

Truax Jet Fuel Storage Madison, Wisconsin

The Wisconsin Air National Guard post at Madison's Truax Field was in need of a new upgrade of their Jet Fuel storage complex. Hooper Corporation was sub-contracted through JH Findorff and Son to install new storage tanks and piping systems to complete their new complex. The new 100,000 gallon storage tanks are fabricated out of Carbon Steel with an interior Epoxy Lining. 90% of the piping is 304L Stainless Steel. The remainder is epoxy-lined Carbon Steel. The piping ranged in size from 1/2" schedule 40 up to 10" .250" wall. Approximately 85% of all the welds on this project were done in Hooper's Pipe Fabrication Shop. All of the welds, both in the field and in the shop, had to pass an x-ray examination. The final product then had to pass a rigorous performance and commissioning test before being brought on-line.
