

Project Profile

Overture Center Madison, Wisconsin

Phase I of Overture Center—Madison’s new downtown art district—is currently underway. Throughout this 5-year project, Hooper Corporation’s Fire Protection and Plumbing Departments and General Heating and Air Conditioning will play integral roles in this design-build project. Having been in on this project during the early stages of design, we have been able to work closely with the architect, design team and construction manager to ensure that the building process runs smoothly.

This phase consists of new construction to create the 2,200-seat Overture Hall; “Kids in the Rotunda” Amphitheater; three community performance spaces; Wisconsin Academy of Sciences, Arts and Letters Gallery; two additional community art galleries and a community support space for receptions and meetings.

We are very proud to be part of this wonderful, visionary project.
